Jonathan Rich

701 Ellicott Street
Buffalo, NY 14203

Dear Mr. Rich,

When I first heard of MemoryFox, I thought: "Is this related to FireFox?" However, after doing my research, I was pleasantly surprised to learn about the company's unique mission of helping communities share their stories. To help the company continue serving its mission, I submit my interest to be a *Software Engineer Intern* at MemoryFox

Junwoo has told me great things about his time working at MemoryFox from the folks he worked with, the technology, and to the product itself. I am enthusiastic to learn even more!

Over the past 2 years I have developed robust problem-solving skills in web and mobile development by having worked on personal projects and program initiatives like Codepath.org and IBM Accelerate.

In my latest venture, I am working on developing a new side project that solves the problem of explaining code to students. In less than 5 weeks my team and I will have a prototype that allows users to highlight code in an online IDE and comment its meaning just how a Google Doc implements commenting. I am leading the team as a full stack developer using React.js, Node.js, and MongoDB.

Previously, I interned at Everest Reinsurance where I co-developed and managed a team of 6 interns in a successful attempt to automate manual data entry done by accountants in the reinsurance division. The working prototype is expected to save Everest \$30,000 annually.

I would like to use my development skills to serve as either a frontend or backend developer. I can easily be reached by email (mendezanthony608@gmail.com) or by phone (3478374105).

Thank you for reading,

Anthony
